COVID-19 Impacts and Recovery
- Travel demand and mode choice during and after the pandemic
- Transportation equity under pandemic impacts
- Solutions for safe transit during and after the pandemic
- Long term mobility impacts from pandemic

Safety
- Pedestrian/bicyclist safety
- Rural road safety
- Countermeasures against surge of roadway crashes and fatalities

Accessibility
- Equity for all ages, abilities, and incomes
- Complete streets
- Multimodal Issues
- Optimization of resources for social benefit

Efficiency
- Congestion and delay relief
- Streamlining processes

Data
- Improved data on freight movement and priorities
- Performance measurements
- New data sources and collection technologies
- Data mining and decision support methods and tools
- Data issues and quality control methods
- Better data on active transportation/new mobility option demands and usage

New Mobility and Emerging Technologies
- Infrastructure needs: V2I communications and emerging communication technologies (such as 5G)
- Early adopters and near-future applications
- Interactions between new mobility services and public transit
- Curb space management
- Impacts of e-commerce
