UW Autism Center

We're here to walk this journey with you.

Founded in 2000, the UW Autism Center has served over 10,000 individuals with ASD and their families. We have increased the capacity of our communities to serve people with ASD by providing training to over 10,000 people since opening our doors. Our research program is internationally recognized and directly informs our understanding of ASD and the most effective treatment approaches to help individuals and families.

Our experienced staff of clinicians, including speech pathologists, BCBA's, physicians, and psychologists are dedicated to helping you through every step of your journey with autism, from birth through adulthood.

Get involved and learn more!

Clinical services

Providing diagnostic assessments and a variety of intervention services for children and adults with autism spectrum disorder (ASD) and their families across the lifespan.

Training

Offering high-quality training and education for community professionals, parents, caregivers, and students who interact with and serve individuals with autism spectrum disorder (ASD) across Washington and the Pacific Northwest.

Research

Collaborating with families, people with autism spectrum disorders, developmental disabilities, and typical development to conduct research that will lead to better outcomes for people with autism spectrum disorders (ASD) and their families.
