

Thinking Outside the Box

Individual and Class-Wide Motivation Strategies for Diverse Learners

Reinforcement is an evidence-based practice used to increase target behaviors and skills and can be used effectively with learners across an age range, regardless of cognitive level and/or communication skills. Cooper, Heron, and Heward (2007) said, "positive reinforcement is the most important and most widely applied principle of behavior analysis." Join us to learn more about how to motivate school-aged learners using principles of reinforcement.

Course objectives: In this training, participants will learn more about:

- Effective motivation strategies including positive reinforcement, negative reinforcement, differential reinforcement, and token economy system
- Group and individual reinforcement systems
- How to arrange schedules of reinforcement
- How to identify what a child is interested in and how to use those interests to encourage learning and growth in skills

Who should attend: Teachers and providers with basic working knowledge of Applied Behavior Analysis (ABA)

Content level: Intermediate

Clock hours: OSPI clock hours (3 hours) available for an additional fee

Instructors: Ashley Penney, PhD, BCBA-D and Robin Talley, MEd, BCBA

WHEN

Tuesday, April 30, 2019
3:00 – 6:00 PM
