

Meet the On-Time Autism Intervention (OTAI) Podcasters Jess and Ashley LIVE (online)

In this live meet and greet, Jess and Ashley will discuss the mission of OTAI and the origins of this podcast for parents of children under 3 who have recently been diagnosed with autism. They will briefly share some favorite moments, memories, and take aways from the show's special guests (experts from the field and extraordinary parents). This session will conclude with Jess and Ashley answering questions LIVE from the audience. Can't wait to see you there, it is sure to be a good TIME.

The **On-Time Autism Intervention (OTAI) Project** is a research-community partnership focused on engaging community partners, supporting community providers through collaboration and training, and is currently conducting pilot work in the community. We believe that all children should have access to diagnostic services, parent support and navigation, and intervention services as soon as autism symptoms emerge or as soon as a caregiver has concerns.

Podcasters

Dr. Jessica Greenson, Ph.D., supervises our team of talented clinicians including Speech Language Pathologists (SLPs), Board Certified Behavior Analysts (BCBAs), and Psychologists and the clinical issues that arise for families and children receiving or awaiting services. She works clinically in our Infant/Toddler clinic conducting diagnostic evaluations and parent coaching for children under 3. As a member of the On Time Autism Intervention (OTAI) Team, she partners with parents and community providers for children under

three to help young children gain early access to diagnosis and intervention. She is passionate about providing empirically validated interventions, increasing access in underserved communities, training students and helping parents of children with autism find support and community. Prior to her role in the clinic, Dr. Greenson served as the associate director of a series of NIH funded clinical trails of ABA treatment for toddlers with ASD at UWAC. Dr. Greenson is certified in the Early Start Denver Model (ESDM) of therapy and works with parents of toddlers as an ESDM coach in the clinic.

Dr. Ashley Penney, Ph.D., BCBA-D, is a Licensed Behavior Analyst and Research Scientist at the UW Autism Center. Ashley earned her PhD at the University of Washington in Special Education in 2016. Her dissertation was on the effects of a naturalistic, behavioral parent-implemented group intervention for very young children with or likely to have autism. As a research scientist for the On-Time Autism Intervention Project, Ashley's work focuses primarily on increasing access to developmentally appropriate behavioral

intervention for infants and toddlers with autism. Ashley is passionate about supporting access to high quality services and believes that parents and families are an integral part of success. Her current research focuses on developmentally appropriate, effective intervention that fits within existing service delivery systems and increasing collaboration among professionals from different service delivery systems.
