GOAL:
Make the diagnosis of asthma so that appropriate education and treatment can be provided.

Inclusion Criteria:
Age 0 to 4 Years
Cough or wheeze

Exclusion Criteria:
Other acute primary respiratory diagnosis including pneumonia, croup, bronchiolitis
Children with other chronic disease such as CF, congenital heart or pulmonary disease, immune disorder
Unilateral wheeze suggestive of foreign body

- History of prior trial leading to improvement, or improvement after SABA given in office. (short-acting β (beta) agonist such as Albuterol)

Diagnose and Treat as Asthma
- Classify Severity
- Asthma Education Plan
- Asthma Action Plan
- Note Co-morbidities
- Follow up every 3-6 months
- Spirometry when able

End: Follow until symptom-free. Check for wheeze or persistent cough with next URI.
