

# WRAPSTAT FAQs

This sheet is meant to provide information to our partners and potential collaborators about our new data management system, WrapStat, which supports the Wraparound Fidelity Assessment System tools (the WFI-EZ, TOM 2.0, and the DART). Below is a list of common questions we have received. If you cannot find the answer to your questions below, you can also email us at [wrapeval@uw.edu](mailto:wrapeval@uw.edu).

## ACCESSING WRAPSTAT:

### When will WrapStat be up and running?

WrapStat will do a soft launch on September 1<sup>st</sup>. At that time, all tabs, except the Reports Tab, will be functional. This delay in release was a result of some initial changes to the system thanks to feedback given during pilot testing. Come September, programs will be able to set up users in the system, enter youth into the youth rosters, create an evaluation cycle and begin data collection. All reports - general, WFI-EZ, TOM 2.0 and DART - will be released in the coming months. Reports will be released as they are ready. The General Report and WFI-EZ Report will be the first two released. Followed by the TOM 2.0 and DART.

Note that additional changes to released tabs, like data upload, will come later. WERT will keep all WrapStat users up to date regarding new releases and will provide technical assistance as needed.

### When can my program access WrapStat?

Programs will be transitioned to WrapStat according to their contract renewal dates. If your contract renews on September 1<sup>st</sup>, 2020, you will be transitioned as soon as WrapStat is up and running. If your contract renewal is after September 1<sup>st</sup>, 2020, you will be transitioned at the time of your contract renewal. For example, if your CoMotion contract ends January 1<sup>st</sup>, 2021, you will stay in WrapTrack September 1<sup>st</sup>, 2020, and will later be transitioned to WrapStat on January 1<sup>st</sup>, 2021.

For WrapTrack Users: Please note that while you will gain access to WrapStat with your new license agreement, you are **not** required to transition over at that time from WrapTrack. If you are in the middle of data collection or want more time to transition over, that is fine. WrapTrack will be phased out by April 2021, so please keep that in mind when you are deciding when you would like to transition to WrapStat.

### What do we need to do to get ready for WrapStat?

Prior to accessing WrapStat, programs will need to work one-on-one with WERT to set up their "WrapStat Configuration." Your programs configuration is important and will determine how you can view, sort and report on your data in the system. To learn more about this initial set-up step, please watch the video linked below.

[WrapStat Configuration Video](#)

WERT will reach out to programs to begin this process once we receive your programs new license agreement. Depending on the size and complexity of your Wraparound program's structure, this initial phase may take time to complete. However, once your configuration is set up, you will be able to freely access the system.

### Will you provide trainings for WrapStat?

When you gain access to WrapStat, you will be provided with a comprehensive user manual for WrapStat as well as a series of tutorial videos. So far, early site testers have preferred to follow instructions in videos as they allow the user the chance to re-watch and follow along with the specific steps for a task. Similar to WrapTrack, we will be available for technical assistance and you can email us at [wrapeval@uw.edu](mailto:wrapeval@uw.edu)

## TRANSITION TO WRAPSTAT FROM WRAPTRACK:

### Will I be able to transfer over my program's WrapTrack data to WrapStat?

WERT is working with 3Ci, the developers of WrapStat, to build data upload feature into the system. Once built, users will be able to upload their historical data from WrapTrack into the system. We do not know when this feature will be released but we will keep our users updated about it. Data upload will also allow users to enter open evaluation cycle data into a csv and upload it. This will be particularly useful for programs that license the DART.

Prior to uploading the historical WrapTrack data, users will need to:

1. *Enter in their youth records. To simplify this process users can enter in only the few required variables and use bulk upload*
2. *Transfer their downloaded WrapTrack data onto a csv template. This template is in development now. WERT will update users when this template is available for use.*

### Can we move all of our youth records over?

Yes. Your program can transfer over all your youth records into the system from WrapTrack. If programs want to upload their historical WrapTrack data for the WFI-EZ and/or TOM 2.0, we recommend that you start uploading youth data right away since that is the first step in the process.

Youth bulk upload allows you to input as many youths as you want via a csv. This feature will be useful when migrating your youth.

## Will WERT be doing all of the migration behind the scenes or will programs be expected to enter data, enter things in a spreadsheet for upload, etc.?

Programs are responsible for migrating their youth and eventually their WrapTrack data into the system. WERT is working with 3Ci to make this migration as seamless as possible for programs with the youth bulk upload and data upload. WERT will also provide resources to support users in this process (i.e. videos, guides) and technical assistance throughout this process.

## Will all user accounts and care coordinators be migrated over?

Programs are responsible for setting up their users and care coordinators into the new system. There are several new features that allow for greater specificity for user roles in WrapStat. For example, when setting up a user in the system, you can designate which tabs of the system they do and do not have access to and which tool(s) they can access. Since the systems operate differently, WERT will not be transferring over all users. WERT will set up the Lead Evaluator of your Wraparound Program into the system and that individual can begin to transfer over users into the system.

## TOOLS IN / FUNCTIONS OF WRAPSTAT:

### What tools will be in WrapStat?

WrapStat was developed to support the Wraparound Fidelity Assessment System (WFAS) tools. These tools are the WFI-EZ, TOM 2.0 and DART. WrapStat is available to all Wraparound programs that license the use of at least one of these tools.

### What kind of reporting will be available through WrapStat?

While WrapStat's main function is to support in the implementation and reporting of the WFAS tools, it will also do more general reporting of your Wraparound program. WrapStat will track additional variables that are important for high-fidelity Wraparound including length of enrollment, Care Coordinator turnover, reasons for discharge and basic outcomes measurements. While none of these variables are required in the system, users will be able to run reports on all this information if they choose to record it in the system. All data will be available for raw download.

Additionally, for every report, users will be able to specify which type of information they want to see based on date range and level of analysis. Users will be able to view data from multiple levels, the smallest of which being the care coordinator level. For that level, reports can be generated for a single care coordinator in the system or in aggregate (selecting multiple and/or all care coordinators in the system). This feature will allow users more stratification and specification of their data in reporting to better assess their Wraparound programs fidelity.
